

POWER UNIT

Increase the production capacity of your Neway valve seat cutters by at least 50 percent over manual operation by adding a Neway power unit to your shop.

Cylinder heads set up fast and easy because, unlike most systems, the Neway System brings the machine to the work, rather than bringing the work to the machine. Seat and guide machines are supposed to be fast, but sometimes that speed can be lost in extensive set up time.

The Neway power unit rolls along a bench mounted track to quickly position over the cylinder head. The power unit's double universal joint transmission easily adjusts to any cylinder head shape.

PU-1800 POWER UNIT

A Neway Power Unit puts production capability in your hands. Unlike stone grinders, you can feel the stock removal as you work. The PU-1800 includes motor, transmission, footswitch, trolley and track. Cylinder head stands sold separately.

1800 MOTOR

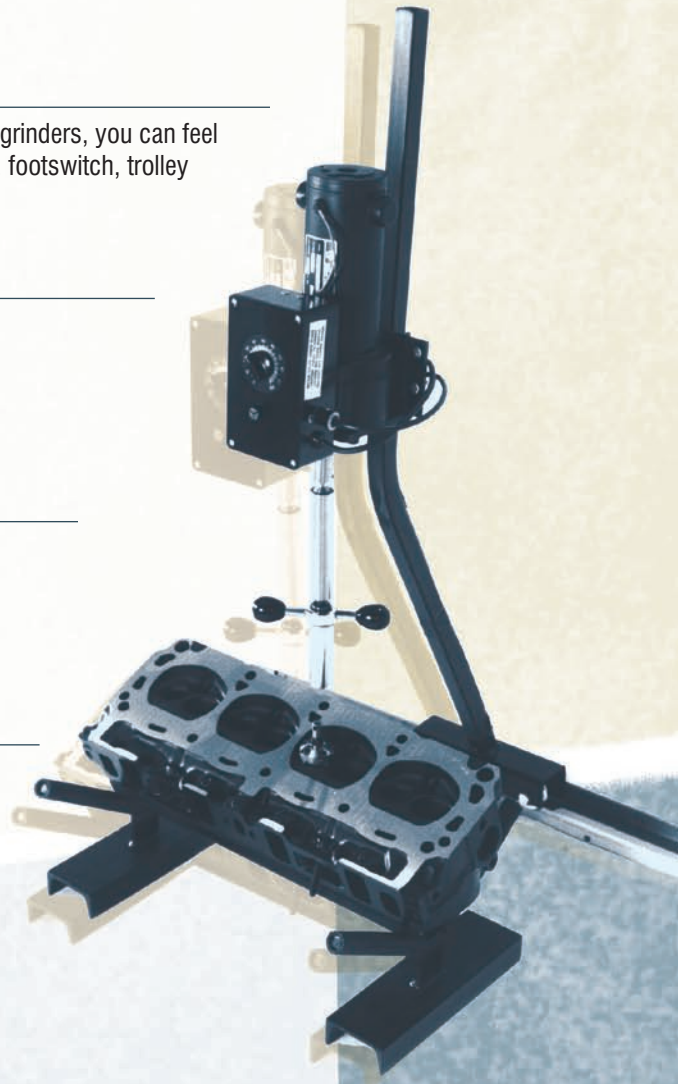

- 10 to 100 RPM variable speed range
- 110 volt power requirement (230 available)
- Constant torque 1/4 hp DC, gear reduced motor
- Foot switch operated

TRANSMISSION

- Double universal joint—follows pilot
- Quick set up, no leveling even on canted valve seats
- Telescoping hexed slide
- Long life hardened components

TROLLEY & TRACK

- Trolley rolls along track to quickly position over valve seat
- Motor adjusts vertically to accommodate valve-in-block engines
- Track is sturdy extruded aluminum
- 4' track standard (other lengths available, up to 12 feet)
